Business Partner

Informa Software is an HP Solution Business Partner and industry leading developer of imaging and document management solutions. Informa's flagship ImageQuest products are designed to transform HP multi-function printers into an easy-to-use document capture and filing system, providing simple yet powerful information management to organizations of all sizes seeking to cut costs and increase productivity.

Small to mid-sized businesses and departments within large corporations and government agencies are looking for an easy way to control their paper burden without the high cost and complexity of traditional document management systems. ImageQuest mfp (*IQmfp*) provides such a solution with only three components – an HP LaserJet mfp, a simple server, and *IQmfp* software. With *IQmfp*, anyone can inexpensively and quickly deploy an easy-to-use electronic filing system.

Informa's unique solution adapts the front panel of the HP series of MFPs, leveraging the embedded functionality to easily send scanned documents to *IQmfp*'s SQL-based archive and indexing application. This allows users to quickly scan pages using the HP MFP, easily categorize and index scanned pages, and conveniently look up documents using web-based search from any computer on the network. *IQmfp* will also capture documents from MS Office applications or any Windows file type through the native Windows "Send to" feature with a few keystrokes.

Using an intuitive browser-based search, *IQmfp* can find documents by keywords or data ranges. Documents are displayed in the industry-standard Adobe® PDF Reader, allowing you to save, print, e-mail or even fax as necessary.

IQmfp saves you money by dramatically reducing labor and other operational costs. Fewer trips to the filing cabinet and copier mean more employee productivity. Finding information quicker means being more responsive to today's demanding business environment.

About Informa Software
